General Information

Balsan

Programme holder

IBU - Institut Bauen und Umwelt e.V.

Panoramastr. 1

D-10178 Berlin

Declaration number

EPD-BAL-20130249-CCA1-EN

This Declaration is based on the Product Category Rules:

Floor coverings, 07-2012

(PCR tested and approved by the independent expert committee)

Nermanes

Issue date

10.03.2014

Valid to

09.03.2019

Prof. Dr.-Ing. Horst J. Bossenmayer (President of Institut Bauen und Umwelt e.V.)

Dr. Burkhart Lehmann (Chairman of SVA)

BOGOLAN

Tufted carpet tiles with recycled content

Owner of the Declaration

Balsan

2 Corbilly

36330 Arthon

France

Declared product / Declared unit

BOGOLAN - 1 m² tufted carpet tiles with recycled content.

Scope:

The declaration applies for the tufted carpet tiles "BOGOLAN", produced in the Balsan manufacturing sites Arthon (tufting and precoating) and Neuvy-Saint-Sépulchre, France (back coating).

It is only valid in conjunction with a valid PRODIS licence.

The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Verification

The CEN Norm EN 15804 serves as the core PCR Independent verification of the declaration and data according to ISO 14025

Product

Product description

Tufted loop pile carpet tiles with solution dyed polyamide 6 fibres (76% recycled content), a polyester primary backing and a heavy backing based on bitumen with a fibre glass reinforcement and a polyester covering fleece.

The recycled content (post- and pre-consumer) out of total weight account for 12,2 %.

According to EN 1307 the carpet tiles fulfill the requirements for luxury class LC1.

Application

According to the use class as defined in EN 1307 the products can be used in all professional area which require class 33 or less.

Technical Data

Constructional data

according to EN 1307

Name	Value	Unit	
Product Form	Tiles	-	
Type of manufacture	Tufted, loop pile	ı	
Yarn type	Polyamide 6		
ram type	76 % recycled content	1	
Secondary backing	Heavy backing,		
Secondary backing	bitumen based	-	
Total carpet weight	4240	g/m²	
Surface pile weight	370	g/m²	
Total thickness	5.4	mm	
Surface pile thickness	2.2	mm	
Number of loops	1698	1/dm ²	

Additional product properties according to EN 1307 can be found on the "Product Information System (PRODIS)", www.pro-dis.info.

PRODIS registration number: 0F6B845E

Base materials / Ancillary materials

Name	Value	Unit
Polyamide 6	16,0	%
Polyester	3,8	%
Limestone	59,4	%
SBR-latex	3,9	%
Bitumen	15,9	%
Glass fibre	0,8	%
Additives	0,2	%

Reference service life

The service life of textile floorcoverings strongly depends on the correct installation taking into account the declared use classification and the adherence of cleaning and maintenance instructions.

A minimum service life of 10 years could be assumed, technical service life can be considerably longer.

LCA: Calculation rules

Declared Unit

Name	Value	Unit
Declared unit	1	m ²
Conversion factor to 1 kg	0.236	-
Mass reference	4,24	kg/m²

System boundary

Type of the EPD: Cradle to grave

System boundaries of the modules A, B, C, D:

A1-A3 Production:

Energy supply and production of the basic material, processing of secondary material, auxiliary material, transport of the material to the manufacturing site, emissions, waste water treatment, packaging material and waste processing up to the landfill of residual waste (except radioactive waste). Credits for electricity and steam from the incineration of production waste are aggregated.

A4 Transport:

Transport of the packed textile floorcovering from manufacturing gate to the place of installation.

A5 Installation:

Installation of the textile floorcovering, production and transport of auxiliary material, waste processing up to the landfill of residual waste (except radioactive waste), the production of the amount of carpet that occurs as installation waste incl. its transport to the place of installation.

Credits for electricity and steam from the incineration of packaging and installation waste leave the product system.

B1 Use:

Indoor emissions during the use stage. Due to known VOC-decay curves of the product after the first year no product related VOC-emissions are relevant.

B2 Maintenance:

Cleaning of the textile floor covering for a period of 1 year:

Vacuum cleaning – electricity supply Wet cleaning – electricity, water consumption, production of the cleaning agent, waste water treatment. The declared values in this module have to be multiplied with the assumed service life of the floor covering in the building considered.

B3 - B7

The modules are not relevant and therefore not declared.

C1 De-construction:

De-construction of the floorcovering is made by handcraft and causes no additional impacts.

C2 Transport:

Transport of the carpet waste to landfill, to the municipal waste incineration (MWI) or to the waste collection for recycling.

C3 Waste processing:

C3-0, C3-1: Landfill and waste incineration need no waste processing.

C3-2: Collection of the carpet waste, waste processing (granulating).

C4 Disposal

C4-0, C4-1: Impacts from landfill or from waste incineration (credits leave the system boundaries), C4-2: The processed carpet waste leaves the system and need no disposal.

D Recycling potential:

D-0, D-1: Energy credits from landfill and from waste incineration (processing with < 60% efficiency), D-2: Transport from the reprocessing plant to the cement plant, substitution of material and fuel input in the cement kiln (substantial and energetic credits).

Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to EN 15804 and the building context, respectively the product-specific characteristics of performance, are taken into account.

LCA: Scenarios and additional technical information

The following information refer to the declared modules and are the basis for calculations or can be used for further calculations. All indicated values refer to the declared functional unit.

Transport to the construction site (A4)

Name	Value	Unit
Litres of fuel (truck, EURO 0-5 mix)	29.4	l/100km
Transport distance	700	km
Capacity utilisation (including empty runs)	85	%
Gross density of products transported	785	kg/m³

Installation in the building (A5)

Name	Value	Unit
Auxiliary (fixing agent)	0.2	kg
Material loss	0.13	kg

Cardboard waste (packaging material) leaves the system for recycling. PE-foil (packaging material) and installation waste are considered to be incinerated in a municipal waste incineration plant.

Maintenance (B2)

Name	Value	Unit
Maintenance cycle (wet cleaning)	1,5	1/year
Maintenance cycle (vacuum cleaning)	208	1/year
Water consumption (wet cleaning)	0.003	m ³
Cleaning agent (wet cleaning)	0,06	kg
Electricity consumption	0.314	kWh

Further information on cleaning and maintenance see www.balsan.com

End of Life (C1-C4)

Three different end-of-life scenarios are declared and the results are indicated separately in module C. Each scenario is calculated as a 100% scenario.

Scenario 0: 100% landfill

Scenario 1: 100% municipal waste incineration (MWI) Scenario 2: 100% recycling in the cement industry

If combinations of these scenarios have to be calculated this should be done according to the following scheme:

EOL-impact = x% impact (Scenario 0)

- + y% impact (Scenario 1)
- + z% impact (Scenario 2)

Name	Value	Unit
Collected as mixed construction waste	4.24	kg
(scenario 0 and 1)	4.24	l kg
Collected separately (scenario 2)	4.24	kg
Landfilling (scenario 0)	4.24	kg
Energy recovery (scenario 1)	4.24	kg
Energy recovery (scenario 2)	1,68	kg
Recycling (scenario 2)	2.56	kg

Reuse, recovery and/or recycling potentials (D), relevant scenario information

The recovery or recycling potentials due to the three end-of-life scenarios (module C) are indicated separately.

Recycling in the cement industry (scenario 2) The organic material of the carpet is used as secondary fuel in a cement kiln. It substitutes mainly lignite (62,7%), hard coal (27,3%) and petrol coke (10,0%).

The inorganic material is substantially integrated in the cement clinker and substitutes original material input. /VDZ e.V./

LCA: Results

Information on not declared modules:

The modules B3 - B7 are not relevant during the service life of the carpet and are therefore not declared. Module C1 causes no additional impact (see "LCA: Calculation rules", "C1 De-construction") and is therefore not declared.

Module C2 represents the transport for scenario 0, 1 and 2.
